*1 When scanning a document larger than A5 size at high resolutions over 600 dpi, the scanning may fail due to insufficient memory.
*2 The scanning speed differs depending on the host computer, the operating system, the application, the measuring method, the quantity of data in the image, and the paper type. The scanning speed depends on a measuring method of Panasonic.
*3 Use "Thin paper mode" when scanning the document less than 40 g/m² (10.6 lb.).
*4 The power requirement differs depending on the country/area.
*5 About the environmental conditions of Imprinter Unit (KV-SS014), refer to the Installation Manual of Imprinter Unit. When printing in conditions outside of the imprinter unit's operating environment, the printing result may be faded or printing may not occur.

Raise Work Efficiency with **Faster Scanning**

High-Speed, High-Volume Scanning

A high-speed, high-volume ADF, which was made possible by advances in image processing technology, has increased the efficiency of processing large numbers of documents.

Reliable Paper Feed

ToughFeed

Document Protection

Multiple sensors check the paper feed conditions to automatically optimise the scanning of various documents while preventing them from being damaged.

- **Jam microphone sensor** — Scanning is stopped when an abnormal noise is detected during the paper feed.
- **Pressure sensor** — The roller pressure on the document is detected, and the height of the feed tray is adjusted.
- **Bent paper sensor** — The bounce of documents that are bound with staples in all directions is detected, and scanning is stopped.

New Mechanical Deskew

The KV-S8147 corrects document skewing up to a maximum of 10 degrees. The sensors have also been increased to five in order to raise the accuracy of detection and de-skewing.

The tilt of the document is controlled by rollers on both sides.

Double Feed Retry

If a double feed was detected, the double feed retry function will return the documents to the feed tray automatically, then separate the double fed documents again and scan them.

Double feeding is detected.* Documents are returned to the tray. The double-fed documents are re-fed, separated, and scanned.
* The KV-S8147 has 5 sensors, and the KV-S8127 has 3 sensors for Double Feed Detection.

Double Feed Skip (DFS)

If double feed retry happens three times for the same document, retry will finish and display the error or the Double Feed Skip (DFS) function can be used to resume scanning.

Movable Exit Tray

Movable exit tray and paper ejection control eliminate fluctuations in the paper exit of mixed scanning documents. Moving up and down of the feed/exit tray also shorten the scanning time.

Feed Tray

The feed tray rises quickly and maintains the optimal pressing force.

Exit tray

The exit tray maintains the optimal height from the exit tray to prevent exit fluctuations.

Heavy Duty **Reliability**

High Durability, Low Maintenance

Long-Life Roller

A long life of 600,000 sheets reduces the need for roller replacement. Select from two types of roller exchange kits to match the replacement to the wear conditions.

Roller Exchange Kit

Model No.	KV-SS064	KV-SS065
Contents	Replacement Roller Unit Set ① Feed roller unit [1 set (2 pieces)] ② Double feed prevention roller unit (1 piece) ③ Separation roller unit (1 piece)	Set with Roller Rubber and DFP Roller Unit *Service visit required ① Paper feed roller rubber [6 sets (12 pieces)] ② Double feed prevention roller rubber set [3 sets (6 pieces)] ③ Separation roller rubber [6 sets (12 pieces)] ④ Double feed prevention (DFP) roller unit [3 sets (3 pieces)]
Roller Replacement	600,000 sheets	3,600,000 sheets*

* KV-SS065 is a set with parts for six replacements. 1 replacement = 600,000 sheets

Easy Maintenance

Maintenance of the transport path is easier because the ADF door opens widely. Also, an LED light automatically turns on when the door is opened, so paper dust and other problems are easy to see.

Full-Colour LCD

An easy-to-see, full-colour LCD enables scanner settings and maintenance without having to use a PC.

Highly Durable Glass Coating

The use of a highly durable glass coating reduces vertical streaking of images due to the effects of paper dust, and decreases the required frequency of maintenance.
